

The Western Queen project is located 90km north-west of Mt Magnet in the Murchison mineral field.

During the December 2017 quarter the Company completed a diamond drilling program at the Western Queen project. The program consisted of five diamond drill holes MXDD001-005 drilled at the Western Queen South mine, testing the main zone below the existing pit. The holes were designed to provide sufficient drill coverage of the deposit to estimate a resource for the project (see full ASX Release dated 4 January 2018).
